According to our (Global Info Research) latest study, the global Wheel Sorter market size was valued at US$ 916 million in 2025 and is forecast to a readjusted size of US$ 1364 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global Wheel Sorter production reached approximately 12,500 units. A Swing Wheel Sorter is an automated device used in logistics sorting systems that utilizes a set of controllable, oscillating wheels or rollers to laterally guide and divert items on a conveyor. When goods move along the main conveyor line and reach a designated sorting position, the swing wheel mechanism adjusts its angle or rotation direction under the control of the system, smoothly directing the items into the ????????? sorting branch line or chute, thereby enabling fast and continuous automated sorting.This equipment features high sorting speed, low noise, minimal impact on goods, and strong adaptability to parcels of various sizes. It is widely used in e-commerce logistics centers, express distribution hubs, and warehousing and distribution systems, and is particularly suitable for efficient sorting of small- to medium-sized items.

The Swing Wheel Sorter market has been steadily expanding in recent years, driven by the continuous growth of e-commerce order volumes, the rapid development of the express logistics industry, and the increasing demand for warehouse automation. Compared with traditional sorting methods, swing wheel sorting equipment offers greater flexibility and adaptability in handling small- and medium-sized parcels, enabling it to meet the operational requirements of multi-category, high-frequency, and fast sorting. As a result, it has been widely adopted in e-commerce warehouses, regional distribution centers, and last-mile delivery operations.As companies place higher demands on sorting efficiency, system stability, and operational cost control, the demand for high-performance sorting equipment continues to increase.
