## Abstracts

According to our (Global Info Research) latest study, the global Wheeled Leaf Blowers market size was valued at USD 341.6 million in 2023 and is forecast to a readjusted size of USD 415.9 million by 2030 with a CAGR of 2.9% during review period.

This report focus on Wheeled Leaf Blowers market. A leaf blower, commonly known as blower, is a gardening tool that propels air out of a nozzle to move debris such as leaves and grass cuttings. Larger units may rest on wheels and even use a motor for propulsion. These are sometimes called 'walk behind leaf blowers' because they must be pushed by hand to be operated.

The rising demand for the forestry equipment in Europe is attributed to the high return-on-investment and success rates in the economies including Germany, the U.K., and France owing to the rise in mechanized practices, low competition, and adoption of precision forestry. Asia Pacific is anticipated to register the highest CAGR from 2023 to 2029. This growth is attributed to the continuing development plans formulated for boosting the forestry industries in economies including China, India, and Indonesia. Integration of the GPS control system within the forestry equipment is one of the primary factors boosting productivity by offering real-time tracking and sustainable operations, thereby majorly increasing its demand in North America and Europe. Furthermore, rising demand for wood pellets as feedstock for power plants in developed economies of Europe and North America is anticipated to bolster the market growth.
