Abstracts

The global Whey Powders for Feed market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to our company's survey, the global annual output of whey powder is about 5.7 million tons, and the production areas are mainly concentrated in Europe and America. Germany, Poland, Italy, the United States, and France are the world's top five major producers of whey powder, and their combined output accounts for more than 60% of the world's total output. The total volume of world trade is about 3 million tons, and the main exporting countries are the United States, Germany and France, accounting for more than 40% of the total export volume. As the world's largest exporter of whey powder, the United States has an annual export volume of about 500,000 tons, accounting for one-sixth of global trade. From 2012 to 2022, China's whey powder import volume will increase from 376,000 tons to 599,000 tons. The average growth rate is about 4.8%. At present, the deep processing of dairy products in China has not yet matured, coupled with the constraints of domestic consumption habits and production costs, domestic whey powder production is far from meeting market demand, and mainly relies on imports. In terms of quality, EU whey powder is superior to The unit price of American whey powder is also higher, about twice the price of the latter. The whey powder imported from the EU is mainly used in the production of infant formula milk powder, while the whey powder imported from the United States is mainly used as feed.

The main ingredients of whey powder are lactose, whey protein, minerals and so on. Whey powder can improve the color, flavor and texture of products, and provide many nutritional values, so it is widely used in food, beverage, feed industry and other fields.
