White copper welding wire is a welding material composed of alloy elements such as copper, nickel and zinc. It is widely used in industrial fields that require high corrosion resistance, high temperature resistance and excellent mechanical properties. It is mainly used for welding copper alloys, brass, cupronickel and other materials. It is commonly found in industries such as marine engineering, chemical industry, power equipment and machinery manufacturing. It is particularly suitable for important equipment and components working in highly corrosive, high temperature or high strength environments. Cupronickel welding wire has good electrical conductivity, corrosion resistance and strong welding performance, and can provide strength and reliability under demanding working conditions.
