White Fused Alumina (WFA) belongs to the group of electro-corundum. It is produced by controlled melting of alumina in an electric arc furnace. White fused alumina (WFA) is raw material characterized with high hardness, yet friable with high purity, chemical stability, a high melting point, and large crystal size.

The white fused alumina market has been experiencing steady growth, driven by its wide-ranging applications in various industries, including abrasives, ceramics, and refractories. As a high-purity material, white fused alumina is favored for its excellent hardness, chemical stability, and resistance to high temperatures. The increasing demand for advanced materials in sectors such as automotive and aerospace has further fueled this market.

Key drivers of the white fused alumina market include the growth of the construction and manufacturing sectors, which require high-performance materials for abrasive products and industrial applications. Moreover, the rising demand for engineered ceramics and specialized coatings is propelling the market forward. As industries evolve, the white fused alumina market is expected to adapt, fostering innovation and new applications in the coming years.

Key producers of white fused alumina include Imerys, Rusal and so on. China is the largest producer of white fused alumina with hundreds of companies engaged in the
