Abstracts

According to our (Global Info Research) latest study, the global White Metal Bearings market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Babbitt bearings are found on motors, fans, pumps, turbines generators and other industrial equipment. The bearings are designed to support the weight of the shaft, while providing a non-damaging surface for the high speed rotating shaft. In a Babbitted bearing, the lining of the bearing is bonded with Babbitt (a low melting-point, soft alloy). In the event of a failure or contamination of the lubrication system, electric arcing, or just wear over time, the softer Babbitt alloy wears instead of the journal or shaft.
