Abstracts

The global White Metal Bearings market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Babbitt bearings are found on motors, fans, pumps, turbines generators and other industrial equipment. The bearings are designed to support the weight of the shaft, while providing a non-damaging surface for the high speed rotating shaft. In a Babbitted bearing, the lining of the bearing is bonded with Babbitt (a low melting-point, soft alloy). In the event of a failure or contamination of the lubrication system, electric arcing, or just wear over time, the softer Babbitt alloy wears instead of the journal or shaft.

This report studies the global White Metal Bearings production, demand, key manufacturers, and key regions.
