Whole body ultrasound equipment is a medical device that uses high-frequency sound waves to create images of various organs and tissues throughout the body. Unlike ultrasound systems designed for specific regions, whole body ultrasound allows for the scanning of multiple areas, such as the abdomen, chest, muscles, and joints. This non-invasive tool is commonly used for the early detection of diseases, assessment of soft tissue conditions, and guiding certain medical procedures. It provides a comprehensive view of the body without the use of radiation.
