Whole Dried Apricots are dried fruit products made from intact apricots after pitting or whole-fruit processing, drying, sorting, and packaging. They retain concentrated sweetness, fiber, flavor, and shelf stability. They are sold as snacks, baking ingredients, nut and dried fruit mixes, foodservice ingredients, and export food products. The product boundary excludes diced apricots, apricot paste, apricot powder, fresh apricots, and mixed dried fruit products.

The industry chain includes upstream apricot cultivation, harvesting, grading, sulfur treatment or natural drying inputs, packaging materials, and food safety testing. Midstream producers conduct washing, pitting, drying, sorting, moisture control, inspection, packaging, and storage. Downstream demand comes from retailers, snack brands, bakeries, food processors, foodservice distributors, wholesalers, and export traders.

Whole dried apricots serve as leisure food, baking raw material and fruit additive, retaining natural fruit nutrition with long shelf life. Consumer demand for natural healthy snacks promotes market expansion. Producers optimize low-sugar processing and sterile packaging techniques to upgrade product quality.
