## Abstracts

According to our (Global Info Research) latest study, the global Wi-Fi 6 (802.11 ax) market size was valued at USD 2861.2 million in 2023 and is forecast to a readjusted size of USD 4685.9 million by 2030 with a CAGR of 7.3% during review period.

In 2019, Wi-Fi 6 also known as 802.11ax, was introduced as the latest iteration of Wi-Fi technology. It's changing the way we connect and consume information. The Wi-Fi 6 standard builds on the strengths of earlier Wi-Fi standards while improving efficiency, flexibility, and scalability and is a substantial upgrade over previous generations. These enhancements provide new and existing networks with increased speed and capacity for next-generation applications. Although for the average user, the difference might not be immediately apparent. These changes consist of many incremental improvements that add up to a substantial upgrade. Wi-Fi 6 promised faster speeds (almost 3x faster than Wi-Fi 5) and improved the speed available when several devices operate on one network by communicating with multiple users at the same time (rather than in sequence).? Benefits of Wi-Fi 6 as following: 1. Improved security. Wi-Fi 6 technology supports the newest security protocol, Wi-Fi Protected Access 3 (WPA3). WPA3 has stronger user authentication capabilities and better encryption tools. It helps in providing secure wireless networking. 2. Increased battery life. Wi-Fi 6 has features to effectively put specific devices' Wi-Fi settings to "sleep" when it's not being used. This frees up bandwidth by sleeping connections, not in use and opening them up to other active devices. 3. High speed even when congested. 4. Increasing access point capacity in support of IoT and mobile devices. 5. Beams focused on speed and dependability. 6. 8X8 spatial streams for concurrent usage. Having a Wifi 6 router capable of 8?8 spatial streams means one can service more devices simultaneously and achieve more general efficiency.
