The global Wide Range Diaphragm Gas Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A wide-range diaphragm gas meter is an instrument used to measure gas flow. Compared with traditional gas meters, it has a wider measurement range and can usually measure everything from small air flows to large air flows. This is because it uses a special diaphragm technology that can adaptively adjust the tension of the diaphragm to adapt to different gas flows. Wide range diaphragm gas meters are usually used in gas supply systems, industrial production processes and laboratories to measure gas flow and consumption. They provide accurate measurement results with high accuracy, long life, low maintenance costs and reliability.
