Wide-width shearing machine is a textile machine used for surface treatment of large-format fabrics. It mainly uses high-speed rotating knives or blades to finely trim the fibers on the surface of the fabric, thereby removing excessively long fibers, smoothing the surface of the fabric, and improving the smoothness and feel of the fabric. This type of equipment is widely used in the processing of large-format fabrics, such as home textiles, car seat fabrics, sportswear and other large-scale fabric finishing processes, which can effectively improve the appearance quality and touch of the fabric. Wide-width shearing machines are usually characterized by high efficiency and high degree of automation, and are suitable for large-scale production.
