WiFi camera controller is a device that remotely controls and manages cameras through wireless LAN. It is widely used in security monitoring, remote shooting, smart home and industrial vision systems. The controller usually integrates WiFi module, image transmission interface and control protocol analysis system. It can be used with a variety of network cameras (such as PTZ camera, HD IP camera) to achieve wireless control of camera direction, zoom, aperture, exposure, recording and playback. Users can perform real-time operation and video viewing through the APP or web interface on mobile phones, tablets or computer terminals. Some high-end models also support multi-channel video stream management, AI video analysis and docking with cloud platforms. WiFi camera controller effectively reduces wiring complexity, improves system flexibility and deployment efficiency, and is especially suitable for scenarios that require rapid deployment or space constraints, such as retail stores, small business monitoring, mobile work vehicles and temporary event sites. With the development of intelligent security and wireless communication technologies, such products are continuously evolving towards miniaturization, integration and intelligence.
