Abstracts

The global Wildlife Park market size is expected to reach \$ 1972.6 million by 2029, rising at a market growth of 7.6% CAGR during the forecast period (2023-2029).

A zoo refers to a local facility that puts some wild or exotic animals in a place such as a fence for public viewing. With the development of modern times, the norms and professional requirements of zoos have gradually become stricter. In addition to being able to educate the public, most of them also have the function of conservation institutions. Many big cities in the world have zoos, and zoos are mainly used to attract tourists. Many non-profit zoos, especially those established for the purposes of conservation biology, education, and biological research, rely on public funding for their maintenance. Wild animals in safari parks refer to various mammals, birds, reptiles, amphibians, fish, molluscs, insects and other animals that live in the natural state and are not domesticated.
