Willemite is a zinc silicate mineral with the chemical formula Zn_2SiO_4 . It commonly forms in the oxidation zones of zinc ore deposits and is often found as green, yellow, or colorless crystals. Willemite is known for its strong fluorescence under ultraviolet light, glowing bright green, which makes it popular among mineral collectors. It has a hardness of about 5.5 on the Mohs scale and typically occurs in granular, massive, or crystalline forms. Willemite is an important ore of zinc and is sometimes used in jewelry when transparent and well-formed crystals are available.
