Wind blade inspection equipment refers to specialized systems used to detect surface and internal defects of wind turbine blades through visual, ultrasonic, thermal, or optical inspection methods. These solutions are widely applied in onshore and offshore wind farms for routine inspection, condition assessment, and preventive maintenance to reduce downtime and extend blade service life. In 2025, the average selling price of wind blade inspection equipment is approximately US\$145,000 per unit, with global sales volume reaching around 8,900 units. The industry maintains a gross margin of 45%–65%, supported by high system integration value, safety-critical inspection requirements, recurring inspection cycles, and strong linkage to wind farm operation efficiency.
