According to our (Global Info Research) latest study, the global Wind Farm Simulation Software market size was valued at US\$ 2267 million in 2025 and is forecast to a readjusted size of US\$ 3419 million by 2032 with a CAGR of 6.0% during review period.

To address the problems of low accuracy in wind resource assessment, long micro-site selection cycles, and limited grid connection stability analysis methods in traditional wind farm design, wind farm simulation software was developed. Since its emergence in the early 21st century, wind power generation technology has made significant progress. Currently, wind farm simulation software has evolved into a comprehensive system encompassing wind resource assessment, power generation simulation, load analysis, and grid connection characteristic simulation. It is widely used in areas such as macro-site selection of wind farms, micro-layout of wind turbines, and grid connection assessment, significantly improving the accuracy of wind farm design and the reliability of power generation prediction.
