The global Wind Lidar market size is expected to reach \$ 623 million by 2029, rising at a market growth of 12.4% CAGR during the forecast period (2023-2029).

Global 5 largest manufacturers of Wind Lidar are Vaisala, Movelaser, ZX Lidars, John Wood Group and Lockheed Martin, which make up about 65%. Among them, Vaisala is the leader with about 20% market share.

China is the largest market, with a share over 40%, followed by Europe and North America, with the share about 35% and 15%. In terms of product type, Nacelle Wind Lidar occupies the largest share of the total market, more than 80%. In terms of product application, Wind Energy occupies the largest share of the total market, about 80%.

Wind Lidar is a type of lidar which can be used to measure wind speed and to provide information about vertical distribution of the aerosol particles. It is a new atmospheric remote sensing equipment, and semiconductor wind lidar the only effective tool to achieve remote sensing for the three-dimensional atmospheric wind field.

Lidar is a remote sensing technology that measures distance by illuminating a target with a laser and analyzing the reflected light. Although thought by some to be an acronym of Light Detection and Ranging, the term lidar was actually created as a portmanteau of 'light' and 'radar.'

This report studies the global Wind Lidar production, demand, key manufacturers, and key regions.
