Abstracts

The global Wind and Solar Power Production Forecasts market size is expected to reach $ 1211 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Wind and solar power production forecasts are predictions or estimates of the electricity output that can be expected from wind and solar energy generation facilities over specific time periods. These forecasts are critical for energy grid operators, utilities, and energy market participants to plan, manage, and optimize the integration of variable renewable energy sources, such as wind turbines and solar photovoltaic (PV) systems, into the electricity grid.

The growth of the wind and solar power production forecasts market is primarily driven by the continuous expansion of global installed wind and photovoltaic (PV) capacity, the rising penetration of new energy sources within power systems, and the acceleration of market-oriented power sector reforms. As the share of wind and solar power increases, their inherent susceptibility to weather fluctuations—characterized by intermittent and volatile output—has heightened the grid's demand for high-precision, real-time power forecasting. Simultaneously, the development of day-ahead, intraday, and real-time electricity markets means that forecasting accuracy directly impacts deviation penalties, trading costs, and generation revenues, thereby incentivizing power generation companies and trading entities to adopt specialized forecasting technologies. Furthermore, the rapid expansion of energy storage, virtual power plants, integrated wind-solar-storage systems, and centralized new energy operation models has broadened the demand for forecasting at the multi-plant and asset-portfolio levels. Meanwhile, the maturation of high-resolution numerical weather prediction, satellite data, real-time SCADA data, and AI/machine learning technologies has continuously

improved forecasting accuracy, rolling update capabilities, and resilience against complex weather conditions; together, these factors are transforming wind and solar power forecasting from a traditional auxiliary tool into a critical, foundational capability for new energy dispatch, trading, and intelligent operations.

Report Scope

This report studies the global Wind and Solar Power Production Forecasts demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Wind and Solar Power Production Forecasts, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Wind and Solar Power Production Forecasts that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Wind and Solar Power Production Forecasts total market, 2021-2032, (USD Million)

Global Wind and Solar Power Production Forecasts total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Wind and Solar Power Production Forecasts total market, key domestic companies, and share, (USD Million)

Global Wind and Solar Power Production Forecasts revenue by player, revenue and market share 2021-2026, (USD Million)

Global Wind and Solar Power Production Forecasts total market by Type, CAGR, 2021-2032, (USD Million)

Global Wind and Solar Power Production Forecasts total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Wind and Solar Power Production Forecasts market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include State Power Rixin Tech, energy & meteo systems, Beijing East E-Energy Technology, UL Solutions, Vaisala, DNV, Guodian Nanjing Automation, NR Electric, Meteologica, enfor, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Wind and Solar Power Production Forecasts market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
