Abstracts

According to our (Global Info Research) latest study, the global Wind Power Fiberglass Fabric market size was valued at US\$ 1756 million in 2025 and is forecast to a readjusted size of US\$ 2758 million by 2032 with a CAGR of 6.6% during review period.

In 2025, global Wind Power Fiberglass Fabric production reached approximately 742k tons, with an average global market price of around US\$2.3k per ton.

Wind power fiberglass fabric generally refers to glass-fiber reinforcement textiles used in wind turbine blades and related composite structures—most commonly multiaxial non-crimp fabrics (NCF) such as biaxial/triaxial/quadraxial stitched fabrics. They are made by laying E-glass rovings in orientations like $0^{\circ}/90^{\circ}/\pm 45^{\circ}$ and stitching them together, enabling fast wet-out in vacuum infusion/RTM processes and delivering high in-plane stiffness and fatigue performance under bending, shear, and torsion loads.

Upstream includes glass fiber rovings/direct roving, sizing/chemicals, polyester stitching yarn, optional chopped-strand mat layers, and blade resin systems (epoxy/UP/vinyl ester) plus process consumables. Midstream players produce and slit multiaxial stitched fabrics in architectures such as $0/90$, ± 45 , and $0/\pm 45/90$ with specified areal weights and widths, supplying blade makers and composite part manufacturers. Downstream demand is concentrated in wind blade manufacturing and blade repair (and some nacelle covers/fairings). Typical reinforcement suppliers include Owens Corning, Jushi, and CPIC, while OEM/blade ecosystems (e.g., Vestas, Siemens Gamesa, GE Vernova, Goldwind) impose strict qualification and specification control.

The annual production capacity of a single-line Wind Power Fiberglass Fabric is

approximately 5k tons, with a gross profit margin of approximately 15%-30%.
