A flange is an external or internal ridge, or rim (lip), for strength, as the flange of an iron beam such as an I-beam or a T-beam; or for attachment to another object, as the flange on the end of a pipe, steam cylinder, etc., or on the lens mount of a camera; or for a flange of a rail car or tram wheel. Thus flanged wheels are wheels with a flange on one side to keep the wheels from running off the rails.

Wind power flange is the key to the connection, supports and mechanical parts of wind power towers, supports and mechanical parts, it is an important component of wind power generation equipment, and Manufacturing production has very strict requirements.
