Abstracts

The global Wind Power Forecasting market size is expected to reach $ 558 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Wind power forecasting is a technology and service that predicts the output power and generation volume of wind farms or regional wind power clusters over specific future timeframes. It utilizes data from Numerical Weather Prediction (NWP), wind speed and direction observations, meteorological towers or LiDAR, wind farm SCADA systems, and historical generation records, while integrating physical models, statistical models, machine learning, and artificial intelligence algorithms.

The Wind Power Forecasting market is primarily driven by the continued expansion of global wind power capacity, accelerating offshore wind development, rising penetration of wind generation in power systems, and the increasing marketization of electricity trading. Because wind power output is highly dependent on wind speed, wind direction, and changing weather systems, its inherent variability creates greater balancing and scheduling challenges as wind generation represents a larger share of the power mix, increasing demand from utilities and grid operators for more accurate, high-frequency, and continuously updated forecasts. At the same time, the growth of day-ahead, intraday, and real-time electricity markets is making forecasting accuracy increasingly important to imbalance costs and trading profitability. In addition, the development of large-scale wind power bases, offshore wind clusters, centralized multi-site operations, energy storage, and virtual power plants is expanding forecasting requirements from individual wind farms to portfolio and regional levels, while advances in high-resolution NWP, LiDAR, real-time SCADA data, cloud computing, artificial intelligence, and machine learning continue to improve forecast accuracy and automation, supporting wind power forecasting as a core digital capability for wind operations, grid

Report Scope

This report studies the global Wind Power Forecasting demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Wind Power Forecasting, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Wind Power Forecasting that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Wind Power Forecasting total market, 2021-2032, (USD Million)

Global Wind Power Forecasting total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Wind Power Forecasting total market, key domestic companies, and share, (USD Million)

Global Wind Power Forecasting revenue by player, revenue and market share 2021-2026, (USD Million)

Global Wind Power Forecasting total market by Type, CAGR, 2021-2032, (USD Million)

Global Wind Power Forecasting total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Wind Power Forecasting market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include State Power Rixin Tech, energy & meteo systems, Beijing East

E-Energy Technology, UL Solutions, Vaisala, DNV, Guodian Nanjing Automation, NR Electric, Meteologica, enfor, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Wind Power Forecasting market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
