## Abstracts

The global energy transition is one of the major trends being witnessed in the market. The power sector around the globe is undergoing a major transition as power generation from fossil fuels is slowly being replaced with renewable sources. The need to reduce the carbon footprint has resulted in many countries implementing renewable energy-specific targets and policies. In addition to policies, the rapidly decreasing cost of renewable technologies, particularly solar and wind, has led to a continuous increase in the production of energy from renewable sources.
