Abstracts

According to our (Global Info Research) latest study, the global Wind Turbine Electromagnetic Brake market size was valued at US\$ 224 million in 2025 and is forecast to a readjusted size of US\$ 343 million by 2032 with a CAGR of 6.0% during review period.

In 2025, global Wind Turbine Electromagnetic Brake production is approximately 162,161 units, with an average global market price of around US\$1,342 per unit. Gross margin is about 34%, and the cost is around US\$886 per unit. Global production capacity is estimated to be around 200,600 units. A Wind Turbine Electromagnetic Brake is an electromagnetic braking device used in wind turbines to provide braking, release, holding, and safety-locking functions through electromagnetic force, spring force, and friction components. It is commonly installed in pitch systems, yaw systems, drive motors, or auxiliary transmission units of wind turbines. The product is used to lock moving components during shutdown, power failure, system faults, maintenance, or emergency conditions, helping prevent blade pitch loss, abnormal yaw movement, or motor reverse rotation. Compared with hydraulic brakes, wind turbine electromagnetic brakes are more compact, faster in response, and easier to control, making them suitable for motor-end braking and safety holding applications in wind turbines.

As wind turbines continue to develop toward larger capacity, higher reliability, smarter operation, and lower maintenance requirements, wind turbine electromagnetic brakes are evolving toward higher braking torque, longer service life, lower noise, stronger corrosion resistance, and intelligent monitoring. Future demand will be driven by new wind power installations, replacement demand from aging turbines, upgrades of pitch and yaw systems, and the growing need for high-protection and high-reliability braking

components in offshore wind projects. Manufacturers are increasingly focusing on friction material durability pitch and yaw systems, and the growing need for high-protection and high-reliability braking components in offshore wind projects. Manufacturers, stable electromagnetic response, fail-safe holding capability, lightweight structure, and condition monitoring, turning electromagnetic brakes from traditional actuator components into key intelligent safety components within wind turbine control systems.
