According to our (Global Info Research) latest study, the global Wind Turbine Gearbox market size was valued at US\$ 6331 million in 2024 and is forecast to a readjusted size of USD 10200 million by 2031 with a CAGR of 7.1% during review period.

Wind Turbine Gearbox is an important mechanical components, and its main function is to wind round the momentum generated by wind is passed to the generator and make the appropriate speed. Usually wind wheel speed is very low, far less than required by the generator speed, the growth rate effect of the gearbox gear vice, so the gearbox will also be called a growth box. According to the general layout of the unit, sometimes the wind turbine wheel is directly connected to the drive shaft (commonly known as the shaft) and the gear box together as one, shaft and gearbox are arranged, during which the tension device or coupling connected structure. Brakes in order to increase the braking capacity of the unit, often set in the input or output of the gearbox, with the tip brake (fixed pitch wind wheel) or pitch from the brake to the unit drive system combined braking.

Global Wind Turbine Gearbox key players include Siemens, China Transmission, ZF, etc. Global top three manufacturers hold a share about 75%.

China is the largest market, with a share over 35%, followed by North America and Europe, both have a share over 45 percent.
