A wind turbine is usually equipped with three-phase generators such as synchronous generator and asynchronous generator to convert mechanical energy into electrical energy.

SCOPE OF THE REPORT:

This report focuses on the Wind Turbine Generator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The growing number of research and developmental activities in direct-drive generators for wind turbines is one of the key trends that will accelerate the growth of the market. Technological advancements such as the direct-train technology eliminates the need for a gearbox and are lighter in weight. Also, since these direct-drive turbines involve low maintenance, they are considered as the future of offshore wind turbines.

The worldwide market for Wind Turbine Generator is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
