The Windfree sensor is an innovative technology applied in air conditioning systems, designed to provide a comfortable air circulation experience without direct airflow. Its core principle involves real-time monitoring of indoor temperature, humidity, airflow, and other data through high-precision sensors, adjusting the air conditioner's wind force and direction based on this information. This prevents direct cold airflow and ensures uniform air distribution, achieving a comfortable, almost imperceptible cooling or heating effect. The Windfree sensor utilizes intelligent algorithms and sensing technology to precisely control airflow while optimizing energy use, improving the air conditioner's efficiency.
