Window automation is used predominately for the purpose of natural ventilation and smoke ventilation and opening hard to reach windows.

According to our (Global Info Research) latest study, the global Window Automation market size was valued at USD 4779.6 million in 2022 and is forecast to a readjusted size of USD 5980.5 million by 2029 with a CAGR of 3.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The extraction of smoke and heat build up in any building can often be a difficult task to overcome. However, the inclusion of window automation systems can provide a simple ventilation system that meets with Building Regulations. By fitting a window with a mechanical actuator linked to a smoke and heat detecting system, the window will open and close automatically when smoke or excess heat are detected, returning the building to tenable conditions for its occupants.
