Windshield Wiper with Bone, also known as traditional wiper, is composed of a skeleton and a rubber strip, and the skeleton is composed of metal materials with 4-8 wing angles. Its working principle is to press the wiper blade on the glass through several support points on the skeleton, so that the pressure of each support point on the wiper blade reaches an average. During use, the pressure of each support point of the bone scraper is averaged, and the degree of wear of the glass when it is scraped by the skeleton is averaged, but the disadvantage is also very obvious, that is, the scraping noise is relatively large.
