The global Wine Bottle Cork market size is expected to reach \$ 24780 million by 2029, rising at a market growth of 5.5% CAGR during the forecast period (2023-2029).

Ongoing research and development aim to improve cork production techniques to reduce the incidence of cork taint, a common issue associated with natural corks. Techniques such as sensory analysis and gas chromatography are being employed to detect and eliminate tainted corks.

A wine bottle cork is a cylindrical stopper used to seal wine bottles. It is typically made from the bark of the cork oak tree (*Quercus suber*), which is native to southwest Europe and northwest Africa. The use of cork as a bottle closure dates back centuries and has been a traditional choice in the wine industry.
