Abstracts

The global Wine Bottle Security Tag market size is expected to reach \$ 369 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

A Wine Bottle Security Tag is a dedicated anti-theft and anti-tampering device tailored for wine bottles, usually fixed on the bottleneck, bottle capsule or label; it adopts mechanical locking, electronic article surveillance (EAS) or tamper-evident design to deter shoplifting and unauthorized removal in retail scenarios such as liquor stores, supermarkets and duty-free shops, triggering alarms or leaving damage traces when illegally detached, protecting high-value wine products while adapting to bottle packaging shapes and retail display needs.

In 2025, global Wine Bottle Security Tag production reached approximately 880 million units, with an average global market price of around US\$ 0.3 per unit. The production capacity of Wine Bottle Security Tag is approximately 1,113 million units per year, the average gross profit margin was 28-31%.

The upstream of the wine bottle security tag supply chain includes suppliers of raw materials like plastics, metal parts, EAS/RFID electronic components and adhesives, as well as production equipment manufacturers for injection moulding and assembly; midstream is the tag manufacturers integrating processing, assembly, electronic module integration and quality inspection; downstream covers product distributors and wholesalers, end customers such as retail stores, wineries and duty-free shops, plus logistics enterprises for transportation and service providers for tag recycling and reuse.

The cost structure of wine bottle security tags is dominated by raw material costs including plastic substrates, metal fittings, electronic sensing components and adhesive

materials, followed by manufacturing costs covering injection processing, assembly labour and equipment depreciation; it also includes R&D costs for structural and functional optimisation, packaging and logistics costs for product distribution, as well as indirect overheads such as factory management, quality control and after-sales recycling expenses.
