Abstracts

According to our (Global Info Research) latest study, the global Wingless eVTOL market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The wingless eVTOL (electric vertical takeoff and landing) is a type of aircraft without traditional fixed wings, featuring a lightweight structure and simplified design. This reduces manufacturing costs, making it one of the most technologically mature configurations. Typically using multicopter or helicopter-like propulsion systems, wingless eVTOLs are well-suited for short-range urban air mobility (UAM) and logistics. Though limited in range, speed, and payload capacity, they offer significant advantages in cost, maneuverability, and safety, making them ideal for applications where speed and long distance are not critical.

This report is a detailed and comprehensive analysis for global Wingless eVTOL market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.
