Abstracts

The global Winter Tire market size is expected to reach \$ 28470 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Winter tires are tires designed for use in colder weather, snow and ice. Winter tires have more sipes than summer tires, increasing traction on snow and ice. Tires designed for winter conditions are optimized to drive at temperatures below 7 °C (45 °F). They are an alternative to the use of snow chains. Winter tires are usually tires with a different rubber composition from all-weather (all-season) tires. Cold-weather tires include a greater percentage of natural rubber and silica so there is not as much hardening as found in synthetic rubber in cold conditions: they provide better traction at lower temperatures.

The world's major Winter Tire manufacturers are Bridgestone, Michelin, Goodyear and Continental, and the top four manufacturers have a total market share of about 41%. Europe is the largest market with a market share of around 62%. This is followed by the Asia-Pacific region, with a market share of about 30%. In terms of product type, Studless is the largest segment with a market share of around 76%. From the perspective of application, Passenger Tires are the largest downstream market, accounting for about 72% of the market share.

This report studies the global Winter Tire production, demand, key manufacturers, and key regions.
