Abstracts

Winter tires are designed to be used in cold weather and in snowy and icy pavements. These tires have a larger gap tread for increasing traction on snow and mud. Winter tires are an ideal fitment in regions having temperature below 45 F, thereby increasing their adoption in the automotive industry. The developments in rubber technologies have led to the development of studless winter tires.

SCOPE OF THE REPORT:

This report focuses on the Winter Tires in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Emerging trends in the market such as the increased use of bio-oils in the manufacturing process of tires would help to boost the growth in the light of demand for ecological tire manufacturing process. Orange oils, extracted from orange peels, are used in the process to help reduce the amount of petroleum used in tires. In addition, the tire market has also witnessed an increase in R&D investments. The use of nanotechnology is a recent invention used in the manufacture of tires. In addition, the demand of retreading of tires is increasing by a considerable rate. The retreading of tires helps to reduce the operating cost significantly in the aftermarket, as it helps to prevent the tires from a complete replacement, and thereby is a cost effective option. The casings can help to provide multiple life cycles, saving a significant amount especially for the fleet operators in the commercial vehicle market.

The worldwide market for Winter Tires is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
