According to our (Global Info Research) latest study, the global Wiper Assembly market size was valued at USD 3641.9 million in 2022 and is forecast to a readjusted size of USD 3997.5 million by 2029 with a CAGR of 1.3% during review period.

The wiper assembly is driven by a motor. The rotating motion of the motor is converted into the reciprocating motion of the wiper arm through the linkage mechanism, thereby realizing the wiper action. Generally, the motor is turned on to make the wiper work. By selecting the high speed and low speed gear, the wiper assembly can be operated. Change the current of the motor to control the motor speed and thus the scraper arm speed.

The downstream market of wiper assemblies is mainly the main engine supporting market. The market size of wiper assemblies is closely related to my country's automobile production.
