The global Wiper market size is expected to reach \$ 7099 million by 2032, rising at a market growth of 2.0% CAGR during the forecast period (2026-2032).

A windshield wiper or windscreen wiper is a device used to remove rain, snow, ice, washer fluid, water, and/or debris from a vehicle's front window so the vehicle's operator can better see what's ahead of them. Wiper includes windshield wiper blades and wiper arm in the report. Windshield Wiper Blades are a device used to keep the window clean, moving back and forth across the windshield countless times as they sweep the water away. A Windshield Wiper Blades mainly consists of a pivot socket, two end ferrules, a spring steel sheet and a rubber strip. The spring sheet steel in Windshield Wiper Blades dispersive pressure to the whole and make all parts of the Windshield Wiper Blades bear averaged force, removing the rain mark and scratch on the windscreen. The Windshield Wiper Blades can last longer, coupled with uniform force, anti-sun, simple structure and lighter weight features. The windshield wiper arms hold the wipers in the correct position through the entire range of motion, and are geared on one end to accept the motor that drives the wiper.
