Abstracts

The global Wire Mesh Lehr Belts market size is expected to reach \$ 522 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Metal wire mesh annealing belts are industrial conveyor belts made of woven or welded metal wires, specifically designed for heat treatment processes such as continuous furnace annealing. They possess excellent heat resistance, dimensional stability, and uniform load-bearing capacity, ensuring consistent annealing results for metal sheets, steel strips, or parts. These conveyor belts are widely used in metallurgy, steel production, and other high-temperature industrial processes. The metal wire mesh annealing belt industry chain includes upstream stainless steel wire, carbon steel wire, and alloy steel wire; midstream processes such as wire drawing, weaving or welding, heat treatment, conveyor belt assembly, and surface finishing; and downstream applications covering metallurgical plants, steel mills, and heat treatment production lines, providing installation, maintenance, and repair services to ensure stable performance and service life. In 2025, the global production of metal wire mesh annealing belts was approximately 18 million square meters, with a global average market price of approximately US\$20 per square meter. The gross profit margin of major companies in the industry ranged from 25% to 40%. In 2025, the global production capacity of metal wire mesh annealing belts was approximately 22.5 million square meters.

This report studies the global Wire Mesh Lehr Belts production, demand, key manufacturers, and key regions.
