According to our (Global Info Research) latest study, the global Wire Mixed Metal Oxide(MMO) Anodes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Wire mixed metal oxide (MMO) anodes refer to a type of anode used in cathodic protection systems. These anodes are constructed using a mixture of different metal oxides, typically consisting of a combination of titanium and various noble metals such as ruthenium, iridium, or platinum. The MMO coating on the anode wire provides excellent electrochemical properties, allowing for effective corrosion protection in environments such as soil, water, or concrete.

MMO anodes are commonly used in industries such as oil and gas, water and wastewater treatment, and infrastructure protection. They are installed in conjunction with a cathodic protection system to prevent the corrosion of metal structures by providing a sacrificial protection mechanism. The MMO coating increases the anode's durability, stability, and efficiency in generating protective current to counteract the corrosion process.
