Abstracts

The global Wire Rope Combination Rigging market size is expected to reach \$ 1310 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Wire rope combination sling is a kind of lifting tool that uses wire rope as the main load-bearing component and is combined with end connectors (such as pressed ferrules, inserted braided buckles, lifting rings, shackles, clasps, etc.). It is particularly suitable for high-strength, large-tonnage, and long-distance lifting operations. Wire rope has good flexibility, high strength and light weight, and can adapt to a variety of complex lifting environments. Depending on the usage scenario, the combination sling can be designed into single-leg, double-leg, three-leg, four-leg and other forms, and can be customized with different lengths and end structures. Compared with traditional slings, wire rope combination slings have the advantages of wear resistance, high load-bearing capacity, and strong adaptability. At the same time, through the standardized process prefabricated in the factory, it also improves the safety and efficiency of lifting operations.
