According to our (Global Info Research) latest study, the global Wired Microphone market size was valued at USD 1483.8 million in 2023 and is forecast to a readjusted size of USD 1762.4 million by 2030 with a CAGR of 2.5% during review period.

With wired microphone, what you put into it is what you get out of it. A high quality mic capsule well matched to voice or instrument is the best possible way to get quality sound. With wireless microphone, you are often limited in the selection of mic capsules, limiting your ability to try different microphones to find the best match. Many wireless microphones use companding to compress dynamic range into a small frequency allocation. There can be a noticeable difference between vocals and instruments on a wireless microphone versus a wired microphone.
