A wired two-way intercom doorbell is an access control device that enables real-time two-way voice communication between visitors and indoor users through wired connections. When a visitor presses the outdoor call button, the signal is transmitted via cables to the indoor unit, allowing voice communication. Some models also support video display and door lock integration. The structure typically includes an outdoor unit, indoor monitor or handset, audio or video processing module, wired connection system, and power supply unit.

Upstream includes audio processing chips, camera modules (for video models), printed circuit boards, power adapters, and plastic or metal housings. Downstream applications include residential buildings, apartment complexes, office buildings, and community security systems. The overall industry gross margin generally ranges from 20% to 40%, with higher margins for video-enabled and building-integrated systems.

In 2025, the global production of wired two-way intercom doorbells was 7.68 million units, with an average price of US\$124 per unit.
