## Abstracts

The global Wireless Bed Exit Alarm market size is expected to reach \$ 59.15 million by 2032, rising at a market growth of 9.5% CAGR during the forecast period (2026-2032).

In 2025, global sales of wireless bed exit alarms reached approximately 250,000 units, with an average selling price of \$120 per unit. Wireless bed exit alarms are widely used safety monitoring devices in the medical field, primarily for elderly care, patient care, and hospital bed monitoring. The device senses whether a patient has left the bed; if abnormal activity occurs (such as a patient attempting to get out of bed or falling), it automatically sounds an alarm to alert caregivers and ensure patient safety. Its main components include sensors, wireless communication modules, alarm devices, and batteries, enabling wireless networking with care systems for remote monitoring and alarm functions.

Upstream raw materials mainly include sensor materials, electronic components, batteries, and wireless modules, sourced from sensor technology, electronic component suppliers, and battery manufacturers. Downstream suppliers primarily include medical equipment distributors, hospitals, nursing homes, and healthcare facilities. The total production capacity of wireless bed exit alarms is projected at 350,000 units per year, with a gross margin of 25%. Downstream consumption is mainly concentrated in medical, nursing home, and long-term care facilities, while upstream material consumption is concentrated in sensors and wireless communication modules.

With the increasing global aging population and the growing demand for smart medical devices, the market demand for wireless bed exit alarms is rising, especially in hospitals and home care, presenting significant business opportunities. In the coming years, with technological advancements and rising healthcare safety requirements, the market for

this product will continue to expand.

The wireless bed exit alarm market is experiencing rapid growth, primarily benefiting from the global aging trend and increasing focus on improving the safety and care of the elderly and patients. With the increasing aging population, especially in developed countries and regions, the demand for elderly care is rising sharply. Among the elderly, the risk of falls and accidents is higher due to mobility issues or illness; therefore, the demand for wireless bed exit alarms in hospitals, nursing homes, and home care facilities continues to grow. These devices effectively reduce the workload of caregivers, improve real-time patient monitoring capabilities, reduce accidents, and improve the quality of care.

Furthermore, with the development of smart home and IoT technologies, more and more wireless bed exit alarms are being integrated into smart care systems. These alarms not only alert caregivers with sound but also provide real-time feedback on patient status via mobile devices, further enhancing the convenience and intelligence of the system. This trend is driving technological advancements in wireless bed exit alarms and bringing higher added value to the market.

In the future, the market for wireless bed exit alarms will continue to expand, especially among the elderly population requiring 24-hour care. As technology continues to improve and production costs decrease, more medical institutions, nursing homes, and home care facilities will begin to adopt this device. This market is expected to become an important part of the smart health care industry, and will also bring considerable business opportunities to related manufacturers.
