Abstracts

A wireless bridge is a type of networking hardware device that enables the connection of two different local area network (LAN) segments by bridging a wireless connection between them. It works much like a wired network bridge and is used to connect LANs that are logically separated and/or located in different physical locations.

These networks can be in the same building but are normally in either adjacent buildings or with the proper antennas and line of sight bridges can even connect networks up to 30 miles apart. Wireless bridges connect to the wired network through the 802.11n port and replicate that data to a remote network bridge or access point via 802.11a/b/g wireless (Wi-Fi) protocol.

According to our (Global Info Research) latest study, the global Wireless Bridge market size was valued at US\$ 2336 million in 2023 and is forecast to a readjusted size of USD 5280 million by 2030 with a CAGR of 12.5% during review period.

Global Wireless Bridge key players include Ubiquiti, EnGenius, TP-LINK, Amped Wireless, ZKAccess, etc. Global top five manufacturers hold a share about 50%.
