Abstracts

The global Wireless Broadband market size is expected to reach \$ 16260 million by 2032, rising at a market growth of 11.3% CAGR during the forecast period (2026-2032).

Wireless technologies using longer-range directional equipment provide broadband service in remote or sparsely populated areas where DSL or cable modem service would be costly to provide. Speeds are generally comparable to DSL and cable modem. An external antenna is usually required.

Wireless broadband Internet access services offered over fixed networks allow consumers to access the Internet from a fixed point while stationary and often require a direct line-of-sight between the wireless transmitter and receiver. These services have been offered using both licensed spectrum and unlicensed devices. For example, thousands of small Wireless Internet Services Providers (WISPs) provide such wireless broadband at speeds of around one Mbps using unlicensed devices, often in rural areas not served by cable or wireline broadband networks.

Wireless Local Area Networks (WLANs) provide wireless broadband access over shorter distances and are often used to extend the reach of a 'last-mile' wireline or fixed wireless broadband connection within a home, building, or campus environment. Wi-Fi networks use unlicensed devices and can be designed for private access within a home or business or be used for public Internet access at 'hot spots' such as restaurants, coffee shops, hotels, airports, convention centres, and city parks.

Mobile wireless broadband services are also becoming available from mobile telephone service providers and others. These services are generally appropriate for highly-mobile customers and require a special PC card with a built in antenna that plugs into a user's

laptop computer. Generally, they provide lower speeds, in the range of several hundred Kbps.

Fixed wireless access works primarily when two fixed locations are required to be connected directly. Traditionally, enterprises used leased lines or cables to connect two different locations. FWA is cheaper alternative, specifically in densely populated areas. Typically, FWA employs radio links as the communication and connecting medium between both locations. Usually, the fixed wireless broadcasting equipment is hoisted at building roofs on both the locations to ensure an obstruction free data transmission. Each of the FWA devices is configured to be in line of sight or is in a similar direction for better signal reception. Moreover, besides connecting one-to-one locations, FWA can be implemented in point-to-multipoint and multipoint-to-multipoint transmission modes.

Global Wireless Broadband key players include Ubiquiti Networks (UBNT), Cambium Networks, Mikrotik, RADWIN, Intracom Telecom, etc. Global top five manufacturers hold a share about 20%. United States is the largest market, with a share about 45%, followed by Europe, with a share about 25 percent. In terms of product, PTP is the largest segment, with a share about 85%. And in terms of application, the largest application is Public Safety, followed by Transportation, Energy, etc.

This report studies the global Wireless Broadband demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Wireless Broadband, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Wireless Broadband that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Wireless Broadband total market, 2021-2032, (USD Million)

Global Wireless Broadband total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Wireless Broadband total market, key domestic companies, and share, (USD Million)

Global Wireless Broadband revenue by player, revenue and market share 2021-2026, (USD Million)

Global Wireless Broadband total market by Type, CAGR, 2021-2032, (USD Million)

Global Wireless Broadband total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Wireless Broadband market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Ubiquiti Networks (UBNT), Cambium Networks, Mikrotik, RADWIN, Intracom Telecom, Netronics Technologies, Proxim Wireless, LigoWave(Deliberant), Redline communications, SuperCom(Alvarion Technologies), etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Wireless Broadband market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Key Questions Answered

1. How big is the global Wireless Broadband market?
2. What is the demand of the global Wireless Broadband market?
3. What is the year over year growth of the global Wireless Broadband market?
4. What is the total value of the global Wireless Broadband market?
5. Who are the Major Players in the global Wireless Broadband market?
6. What are the growth factors driving the market demand?
