Abstracts

The global Wireless Charging Stand market size is expected to reach \$ 5691 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

In 2025, global sales of wireless charging stands reached 180 million units, with an average selling price of \$18 per unit. Total global production capacity stands at approximately 220 million units annually, and the industry's average gross profit margin is around 34%. These stands are smart charging devices that integrate wireless power transfer with device support; they transmit electrical energy from the charging base to terminal devices such as smartphones via electromagnetic induction or magnetic resonance. Additionally, they offer features like stable support, adjustable angles, and multi-scenario adaptability, making them widely used in office settings, homes, automotive systems, and commercial display terminals. Their core components include transmitting and receiving coils, power management chips, magnetic shielding materials, heat dissipation modules, and structural support elements; they support the Qi wireless charging protocol and various fast-charging power levels (ranging from 5W-15W to higher).

Upstream components primarily consist of copper windings, ferrite magnetic sheets, PCBs, structural parts made of ABS/PC plastics or aluminum alloys, and power management chips. Downstream supply chains encompass consumer electronics brands, smartphone manufacturers, automotive electronics integrators, and cross-border e-commerce channels. Future development focuses on integrated in-vehicle wireless charging systems, simultaneous multi-device charging, and upgrades in intelligent temperature control and high-efficiency energy management. Demand growth is driven by the widespread adoption of wireless charging for smartphones, the increasing integration of smart technologies in vehicles, and the continuous upgrading

of consumer electronics accessories; key business opportunities lie in high-power fast charging, automotive-grade reliability, and ecosystem integration for multiple devices.
