Abstracts

According to our (Global Info Research) latest study, the global Wireless Communication SoC market size was valued at US\$ 70833 million in 2025 and is forecast to a readjusted size of US\$ 113924 million by 2032 with a CAGR of 7.7% during review period.

A wireless communication SoC is an integrated circuit product that incorporates a processor or control core, wireless communication baseband and protocol processing units, and memory and peripheral interfaces onto a single chip or within a highly integrated system-on-chip platform. Depending on the product architecture, it may also selectively integrate components such as RF transceivers, audio processors, digital signal processors (DSPs), AI accelerators, programmable logic, or high-speed data converters. Capable of operating independently or with minimal peripheral components, it performs functions including wireless signal processing, communication protocol execution, data transmission, and terminal control.

In 2025, the average price range for global wireless communication SoCs is between \$10.7/Unit and \$12.9/Unit. While the average prices for consumer-grade Wi-Fi, Bluetooth, and wireless audio SoCs are generally lower, 5G smartphone SoCs, automotive-grade chips, specialized communication SoCs, and RFSocS command higher average prices.
