## Abstracts

According to our latest research, the global Wireless Expense Management (WEM) Software market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Wireless Expense Management (WEM) software helps validate, correct, and recover charges associated with an organization's mobile devices such as smartphones, tablets, wearables, and other devices that use wireless telecommunications networks. WEM software, also known as mobile expense management software, helps reduce expenses related to excessive data usage by ensuring employees are using cost-effective mobile and data plans. It also provides complete visibility into the wireless device ecosystem within an organization and provides powerful reporting tools to analyze cost trends and take cost control measures. WEM software is an extension of Telecom Expense Management (TEM) services focused on the complexities of managing expenses associated with mobile devices. WEM tools should not be confused with mobile device management (MDM) software. MDM software optimizes the functionality and security of enterprise mobile devices, including smartphones and tablets, while protecting enterprise networks.
