According to our (Global Info Research) latest study, the global Wireless Fork Scale market size was valued at US\$ 41 million in 2024 and is forecast to a readjusted size of USD 67.1 million by 2031 with a CAGR of 7.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Wireless Fork Scale is an advanced weighing system built into the forks of a forklift, designed to measure the weight of loads directly during lifting operations. Using wireless technology, the scale transmits weight data in real time to a remote display, handheld device, or warehouse management system, eliminating the need for stationary floor scales. This innovation enhances workflow efficiency by allowing operators to weigh goods while transporting them, reducing handling steps and improving accuracy in logistics, shipping, and inventory control processes.
