Abstracts

The global Wireless HDMI Transmitter and Receiver market size is expected to reach \$ 867 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

In 2025, global Wireless HDMI Transmitter and Receiver production reached approximately 3,600 units, with an average global market price of around 150 US\$/unit.

A Wireless HDMI Transmitter and Receiver is a pair of compact, plug-and-play electronic devices designed to transmit high-definition audio and video signals wirelessly from a source device to a display device, eliminating the need for cumbersome HDMI cables. The transmitter connects to the HDMI output port of a source (such as a laptop, game console, set-top box, or camera), while the receiver links to the HDMI input port of a display (like a TV, projector, or monitor), using wireless technologies (typically Wi-Fi, Bluetooth, or dedicated wireless protocols) to deliver stable, high-quality signals with minimal latency. Unlike wired HDMI connections, this device set offers flexible placement of both source and display devices, avoiding cable clutter and enabling seamless signal transmission over short to medium distances, making it ideal for home entertainment, office presentations, and professional setups where cable installation is inconvenient or impractical. It also supports various resolutions, including 4K and 8K in high-end models, ensuring compatibility with modern audio-visual equipment.

The demand for Wireless HDMI Transmitter and Receiver is growing steadily, driven by the increasing popularity of wireless connectivity, the expansion of home entertainment and smart office ecosystems, and the rising demand for flexible audio-visual setups. Key demand comes from three main segments: home users seeking clutter-free

entertainment setups (e.g., connecting game consoles to TVs without cables, streaming laptops to projectors for movie nights), office and educational institutions needing portable presentation tools (e.g., wirelessly connecting laptops to conference room displays), and professional users (such as photographers, videographers, and event organizers) requiring flexible signal transmission for live streams or on-site displays. Consumers are increasingly prioritizing low latency, high resolution, and easy setup, while also seeking compatibility with multiple devices and cross-platform use. Business opportunities lie in developing high-performance models with 4K/8K support and ultra-low latency for gaming and professional use, launching compact, portable designs for on-the-go scenarios, integrating smart features (e.g., multi-device connectivity, remote control), and expanding market reach to emerging regions where smart home and office adoption is accelerating. Additionally, the replacement demand from users upgrading from wired HDMI to wireless solutions and the growing trend of smart homes and remote work further boost market potential.
