Abstracts

According to our (Global Info Research) latest study, the global Wireless HDMI Video Transmitter market size was valued at US\$ 138 million in 2025 and is forecast to a readjusted size of US\$ 207 million by 2032 with a CAGR of 6.1% during review period.

Wireless HDMI Video Transmitter is a wireless transmission device that transmits audio and video signals from the signal source (computer and high-definition playback device) to the remote HDTV or high-definition projector. It can achieve lossless and delay-free transmission of 1080P/60 and 3D without installation.

Global key players of Wireless HDMI Video Transmitter include Shengwei, UGREEN, Zinwell, J-Tech Digital and Accsoon, etc. The top five players hold a share over 35%. Asia-Pacific is the largest market, has a share about 32%. In terms of product type, 5GHz Band is the largest segment, occupied for a share of about 68%, and in terms of application, Commercial Use has a share about 74 percent.

Analysis of market drivers of wireless HDMI video transmitters,

1. Explosive growth in high-definition video consumption

Popularization of 8K/AR/VR content:

The global penetration rate of 8K TVs is expected to reach 25% in 2030 (only 8% in 2023), requiring 48Gbps wireless bandwidth to support lossless transmission.

VR headset resolution upgrades from 4K to 8K, and wireless solutions eliminate cable

constraints and enhance immersion.

2. Reconstruction of home entertainment scenes

Demand for multi-device interconnection:

Smart home hubs integrate game consoles, streaming boxes, PCs, etc. Wireless HDMI transmitters, as 'zero wiring hubs', drive a 30% increase in penetration in living rooms/bedrooms.

The rise of portable projection:

Ultra-short-throw laser projection sales increased by 45% year-on-year, and wireless projection simplified the construction of outdoor camping/business presentation scenes.

3. Upgrade of enterprise collaboration mode

Hybrid office revolution:

The global remote office penetration rate is expected to reach 60% in 2030, and wireless projection solutions support real-time collaboration in conference rooms in multiple locations.

Education digitalization:

The coverage rate of smart classrooms increased by 28% year-on-year, and wireless HDMI achieved multi-screen interactive teaching, replacing traditional wired matrix.

4. Technology iteration breaks through bottlenecks

60GHz millimeter wave popularization:

The new generation of chips supports the 60GHz frequency band, achieving uncompressed 4K@60Hz transmission, with a delay of less than 20ms (traditional 5GHz solution delay>100ms).

AI compression algorithm:

Dynamic frame rate adjustment technology reduces 40% of data volume and is

compatible with old display devices.

5. Cost structure optimization

Scale effect:

The price of key components (such as RF front-end modules) dropped by 15% year-on-year, driving the average terminal price from 299 to 149.

SoC integration:

The single-chip solution integrates codec and antenna, and the BOM cost drops by 30%.

6. Emerging market replacement space

Stock equipment transformation:

There are still 800 million non-smart TVs in the world, and wireless HDMI transmitters give them smart projection functions.

Opportunities in developing countries:

The household TV ownership rate in Southeast Asia/Latin America exceeds 95%, and the wireless solution skips the wiring cost, with a market growth rate of 22%.

7. Ecological compatibility expansion

Cross-platform protocol connection:

Support AirPlay 2, Miracast, HDMI Alt Mode, compatible with iOS/Android/Windows devices.

Cloud gaming experience:

Xbox Cloud/NVIDIA GeForce NOW users exceed 100 million, and wireless transmitters have become standard for cloud gaming terminals.

8. Carbon neutrality policy promotion

Green data center:

Wireless transmission reduces the physical connection between the server and the display end, reducing the PUE value of the computer room by 0.3-0.5.

Reduction of electronic waste:

Modular design supports firmware upgrades and extends the life cycle of the device by 3-5 years.

Summary: The wireless HDMI transmitter market is driven by three core factors: technology upgrade, scenario expansion, and cost reduction. Chinese companies need to focus on the self-developed 60GHz millimeter wave chips and the optimization of AI compression algorithms, while expanding the education/medical vertical scenario solutions to break through the monopoly of European and American brands with differentiated competition.
